RIDE FOR THE FUTURE IN RECYCLED JEANS

ALTHOUGH WE ARE THE MAKER
OF TRILOBITE® MOTORCYCLE
TECHNICAL APPAREL, WE STILL
KEEP IN MIND THE IMPORTANCE OF
A CLEAN ENVIRONMENT. THAT IS
WHY WE CAME TO THE MARKET
WITH PRODUCTS WHICH CONTAIN
EITHER **RECYCLED POLYESTER**
OR **RECYCLED COTTON**.

THE PRE-CONSUMER COTTON FROM
INDUSTRY AND POST-CONSUMER COTTON FROM
DISCARDED CLOTHES GO THROUGH GRINDING
PROCESS AND THEN RAW MATERIAL IS MADE AGAIN.
AFTER THAT, THE RAW MATERIAL IS PROCESSED INTO
YARN AND THE YARN IS TURNED
INTO **RECYCLED COTTON**.

RECYCLED

DENIM

SAVE

THE PLANET

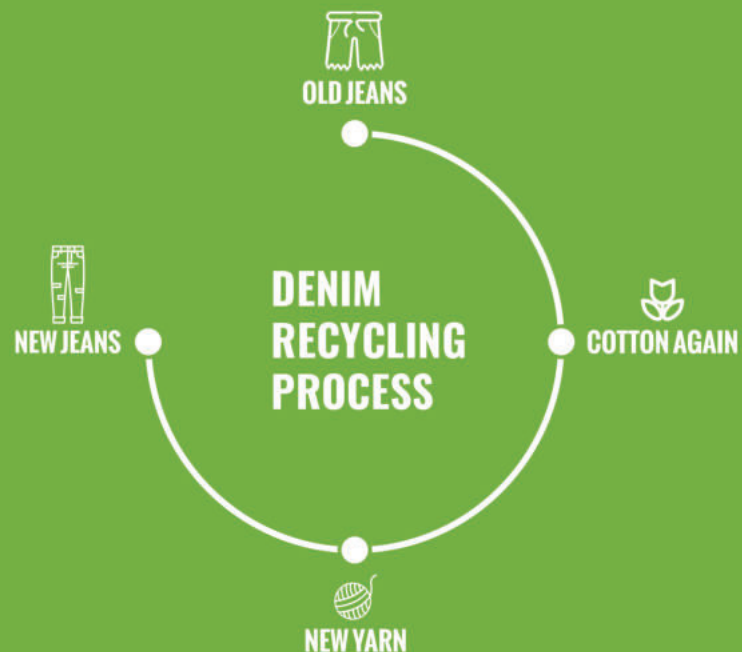

ENJOY

THE RIDE

TRILOBITE® IS PROBABLY ONE OF THE FIRST
MOTORCYCLE APPAREL BRANDS WHICH USES
RECYCLED MATERIALS FOR GARMENT PRODUCTION.
AND THAT'S JUST THE BEGINNING! OUR FUTURE
GOAL IS TO PRODUCE MOTORCYCLE APPAREL FROM
100% RECYCLED MATERIALS.

WHAT WILL HAPPEN TO YOUR JEANS
WHEN YOU NO LONGER NEED THEM?
THEY CAN BE **REUSED!**

We recommend
SAS-TEC
SC-1/KB or SC-1/SB
CE level 2 protectors

SPECIFICATIONS

Material:

- made from **TRI-BASE®** (50% Kevlar® by progressive Dupont™ technology, 30% Protex-M, 18% Cotton, 2% Lycra). It can be worn under any regular pair of jeans. They keep you cooler and more protected than regular layer of jeans.

Protection:

- includes **knee and hips pockets** for protectors
- we recommend SAS-TEC CE level 2 SC-1/KB or SC-1/SB protectors

Features:

- especially designed and developed to be **flexible, super comfortable, with highest level of protection**
- thanks to their **breathability**, pants can be used even in temperature-demanding conditions.

- very comfortable to wear due to a balanced combination of softness, breathability, and good moisture wicking from the body.
- soft stretchy rubber waist with Trilobite® logos
- Trilobite® Skintec underwear pants will keep you warm in winter but still let the air in during hot summer days.

Kevlar® and DuPont™ are trademarks or registered trademarks of E.I. du Pont de Nemours and Company.

TRI-BASE®

TRI-BASE® contains Kevlar® by progressive Dupont™ technology for **strength**, cotton and Lycra® for **comfort** and special fibers of Protex-M inside to **prevent the flame spread** and the ability to stop further combustion. When the flame source is removed, Protex-M has a self-extinguishing nature by which combustion stops immediately. When thermoplastic fibers, such as polyester and nylon, melt they produce hazardous high-temperature droplets that could cause severe burns to the skin. Protex-M melt-resistance and carbonization attributes not only extinguish the fire but also play an important role in preventing secondary injuries.

2063

LADIES

COMES IN 3 DIFFERENT SHAPES

FINE

FOR STRAIGHT FIGURES WITH JEANS TOO TIGHT IN THE WAIST

Do you have straight waist, slim hips and thighs?**FINE** shape is your choice. It will give you the right shape of your bum and it does not stress your belly.

REGULAR

THE WAIST WILL FIT PERFECTLY AND LEGS WILL LOOK LONGER

Are you evenly proportioned from waist to thighs? ... **REGULAR** shape is your choice. It will give you the right shape of your bum and the legs will appear slightly longer.

DARING

NO MORE GAP IN THE BACK THANKS TO HIGHER BACK RISE

Do you have defined waist, fuller hips and thighs? ... **DARING** shape is your choice. Thanks to the higher waist, you will not see the gap in the back and your bum will look great.

TECHNICAL SPECIFICATION

At Trilobite® we recognize 3 key crucial elements which must reach their right balance:

SAFETY / COMFORT / STYLE

or

STYLE / COMFORT / SAFETY

or

COMFORT / STYLE / SAFETY

Trilobite team knows very well that everyone wants to ride **SAFE**
...however, there are more and more bikers who prefer to ride in **STYLE**
...but at the end, most bikers prefer their riding **COMFORT**.

We want to provide answers to any technical question any biker or Trilobite® customer might have regarding our product range. Whatever the riders are searching for in the world of motorcycle (gear) garments, they will always find it in the Trilobite® range. **SAFETY & STYLE & COMFORT**...these are the core values which Trilobite® is proud of and which are reflected in every product from Trilobite collection.

Trilobite **RESEARCH & DEVELOPMENT** team has already developed various new materials which help bikers increase their riding pleasure. Trilobite will help you ride **SAFE**, with a decent portion of **STYLE**, last but not least, with an uncompromising level of **COMFORT**.

If you are interested what is behind the function of Trilobite products and what literally is inside the garment, find out more on the next pages...

If you are interested, read more...

DYNEEMA®
MATERIAL

TOUGH, TOUGHER, THE TOUGHEST

Dyneema® Denim in majority is a mix of Polyethylene fiber with Cotton. Dyneema® yarn is based on a Ultra High Molecular Weight Polyethylene (UHMWPE) which is manufactured using a special spinning process resulting in a fiber that has an extreme high crystallinity with following properties:

Extreme high tensile strength

Depending on the Dyneema® content in the denim, it is extremely difficult to tear or break the fabric.

It is claimed to be 15 times as strong as steel.

High cut resistance

Denim that contains more than 5 - 10% Dyneema® will have noticeably higher cut resistance

compared to regular fabrics.

Abrasion resistance

Using half the amount of Dyneema® improves the abrasion resistance of a single-layer motorcycle denim with aramid by 70%. The like-for-like improvement is 300%.

Chemically inert

Even though Dyneema® itself is chemically inert and therefore resists almost all types of chemicals, it is not recommended to bleach, nor dry-clean denim with Dyneema® to prevent quality issues related to the Cotton fiber in the denim.

Heat sensitive

Dyneema® has a melting temperature of 140 - 144°C and therefore any exposure to temperatures higher than 130°C, even for short periods (seconds) should be avoided. Hence the recommendation to iron at max 110°C / 230°F and tumble dry at low temperatures.

UHMWPE is odorless, tasteless, and non-toxic, therefore it is widely used in all kinds of industries - bulletproof vests, cut resistant gloves, mooring oil rigs in harbor, fishing nets, biomedical use in orthopedic and cardiovascular implants, sports equipment.

only 0,8 mm thick

Trilobite uses two different compositions:

- 1) UHMWPE 52% + denim for Ton-Up product
- 2) UHMWPE 14% + denim for Go-Up product and Parado Dyneemic Pro

UHMWPE

ultra • high • molecular •
weight • polyethylene

DENIM

TRILOBITEX® LAMINATED MATERIAL

A world's unique performance material by Trilobite® called TRILOBITEX® represents an innovative breakthrough technology in the world of motorcycle jeans protection.

TRILOBITEX® material is especially designed for motorcycle garment. In its 4-layer sandwich construction it combines basic features which are important for every rider – Safety, Abrasion resistance, Breathability, Comfort, Waterproofness.

The four layers are directly laminated which ensures effective product dimensions and gives the jeans civil and ergonomic look.

Trilobite Premium Aramid Fashion® as the first in the world is introducing abrasion resistant, protective waterproof jeans.

There have been many jeans equipped with protective lining but we decided to go ahead and break further limits. Those who wear denim

when riding a bike also want to travel dry and safe. All of this you can have with our new denim range made of technologically advanced TRILOBITEX® material developed exclusively for motorcycle riders.

Membranes will assure unrivalled drainage of moisture away from your skin to the outside environment and still keep a sufficient value of the water column and 100% windproof features.

Thanks to unique nanofiber structure with the fiber diameter up to 150 nm, the nanomembrane has by 20 000 000 pores within 1 cm² more than usual micropore membranes. Thanks to it the nanomembrane is able to reach unique properties which no other membranes in the world can compete. Nanomembrane is very similar to human skin which gives the membrane extremely high values

in its breathable properties. It means the ability to take body moisture away from the skin to the outside environment. Moreover nanomembrane is 100% windproof and its hydrostatic resistance can exceed 10 000 mm+.

TRI-TEX[®] MEMBRANE

TRI-TEX[®] is a microporous Polyurethane coated membrane with pores of different sizes.

TRI-TEX[®] membrane is waterproof, breathable and windproof.

The waterproofness of the membrane is measured on the basis of the water column under the pressure of which the material starts to allow water through it. TRI-TEX[®] is able to hold up to 10 000 mm water column.

The breathability of the membrane means to what extent the membrane is able to let the body moisture vapor through. Thus this ability reduces overheating and wet retention under the membrane layer. Measured in g/cm²/24h TRI-TEX[®] membrane reaches the value of 10 000 g.

WATERPROOF

TRI-TEX[®] membrane is waterproof. It protects rider's body from the rain and water drops. Thanks to this membrane you will stay dry and feel comfortable.

10 000 mm water column

BREATHABLE

TRI-TEX[®] is a breathable membrane. It allows the body moisture to evaporate and letting through to the outside of the garment. Thus the rider stays dry and feels still comfortable.

10 000 g/cm²/24h

PROTECTIVE LINING

KEVLAR[®] BY DUPONT[™]

- original aramid fiber by the progressive DuPont[™] technology which is distinguished by strength and abrasion resistance
- tear resistance
- a high melting degree (450°C) ensures safety in case of high frictional temperature

EXTRAORDINARILY STRONG, LIGHT AND CUT-RESISTANT, DUPONT[™] KEVLAR[®] BRAND FIBRE IS HIGHLY RESISTANT TO CUTS, ABRASION, AND HIGH TEMPERATURES.

BETTER, STRONGER AND SAFER WITH KEVLAR[®] FIBER

Versatile and strong, Kevlar[®] fiber is more than just a series of threads.

DuPont[™] Kevlar[®] fibers are used in a variety of clothing, accessories, and equipment to help make them safer and more durable. With five times the strength of steel based on an equal weight basis, it's the go-to fiber for protective apparel and accessories.

WHAT IS KEVLAR[®] ?

DuPont[™] KEVLAR[®] is an organic fibre in the aromatic polyamide (aramid) family. The chemical structure of para-aramids distinguishes them from other commercial man-made and natural fibers and gives KEVLAR[®] its unique properties. It has high strength, high modulus (stiffness), toughness and thermal stability. In addition, it is resistant to many of the chemicals and solvents encountered in today's industrial environment. This combination of properties makes it an exceptional fibre for use in tyre reinforcement, ballistics applications, ropes and cables, and in protective apparel where high strength, and thermal, puncture, and cut resistance are required.

Tri-Force® is made by assembling cotton fiber with UHMWPE fiber (52% Cotton, 42% UHMWPE, 5% Elasto Multi-Ester, 1% Elastane). This exclusive technology produces genuine denim with a core framework that gives it the mechanical qualities of leather.

Tri-Force® is resistant to abrasion, snagging and tearing and provides exceptional comfort in all seasons. The great thing is that the technology is integrated directly into the fabric and not used as a lining for garment.

It is the only textile capable of protecting against abrasion (including as defined in the motorcycle standard 13595-2) with a single layer of fabric, while still providing the comfort and look of real jeans. Tri-Force® is composite fabric, but it is also flexible, soft, absorbant and breathable.

COMPOSITION OF TRI-FORCE®

Slide distance of AAA certified jeans with Tri-Force®

Distance resistance comparison using the CE-13595-2 standard (8m/s). Slide time and speed comparison using new EU standard EN 17092:2020.

TRI-BASE®

TRI-BASE® is a material which combines of 50% of Dupont™ by progressive Kevlar® trechnology, 30% Protex-M fibers, 18% Cotton and 2 Lycra®. Thanks to this composition of materials, **strength, flame retardancy, heat resistance and comfort** are achieved.

Special fibers of Protex-M inside **TRI-BASE®** fabric prevent the flame spread and the ability to stop combustion. When the flame source is removed Protex-M has a self-extinguishing nature by which combustion stops immediately. When thermoplastic fibers, such as polyester and nylon, melt they produce hazardous high-temperature droplets that could cause severe burns

to the skin. Protex-M melt-resistance and carbonization attributes not only extinguish the fire but also play an important role

in preventing secondary injuries.

Protex is a high performance inherently flame retardant self-extinguishing fiber. Its advanced FR properties when blended with non-FR fibers improve their overall performance.

Key advantages of this Protex-M material are:

- **inherently flame retardant** - Protex-M is inherently flame retardant product in which the fiber resin itself contains the flame retardant ingredient. When the flame source is removed fiber has a self-extinguishing nature by which combustion stops immediately. Unlike FR treatments, there is no deterioration in flame retardanacy after repeated washing or normal use over time.
- **melt resistant** - using of Protex-M fibre stops the spread of the fire and extinguishes it with the char barrier which forms when the flame source appears is removed. Unlike other thermoplastic fibers, such as polyester, Protex does not melt or form droplets that could stick to sking and cause injury
- **highly blendable** - the superior properties of Protex-M allow for blending with flammable fibers in various combinations to achieve a high level of FR performance
- **easy processing** - Protex-M can be blended with other fibers for blending or in various fabric combinations. In most cases it can be processed under the same conditions as conventional acrylic fiber
- **soft and light** - Protex-M is light, warm, soft and flexible due to its unique fiber form

B-DRY LAMINATED MATERIAL

The main advantage of B-DRY is its waterproof features. Three directly laminated layers ensure that you always ride dry with maximum comfort, no matter if you travel in the rain. Water will not get to your body as the laminated nanomembrane works as a barrier that will not let water get to your body as it stops in above layers which dry again quickly.

HYDROPHOBIC TREATMENT

It concerns hydrophobic treatment of textile materials, knittings and other fabrics. On the surface there is a thin layer of nanoparticles and this way an extremely water and oil repellent surface is created. All Trilobite waterproof riding apparel is hydrophobically treated which gives the products additional waterproof properties.

PRINCIPLE

The principle of hydrophobic treatment is that every single fiber is covered with a thin layer of nanoparticles. The result is an extremely high level of hydrophobic features which gives no chance to liquids to stick to the surface of the material thus soil or even damage the fabric.

3-LAYER WAX COTTON® LAMINATED MATERIAL

The concept of Wax Cotton was originally developed in the early 15th century by sailors in England and Scotland. Over the centuries it became very popular for the great performance. Waxed Cotton requires only minimal care to maintain its appearance and can go years without having to be washed. The sprayed wax on top cotton layer formula is non-toxic and non-hazardous.

It performs great in both hot and cold temperatures. The refined wax finish provides an additional layer of protection from rain, moisture and time. Waxed canvas has a long lifespan behaving much like leather. Trilobite® Premium Aramid Fashion uses the best Waxed Cotton on the market to increase the product lifespan and performance.

CORDURA® DENIM WITH COOLMAX® MATERIAL

12.5 oz Cordura® denim with COOLMAX® fibers

CORDURA® Denim fabric helps the jeans last longer than traditional 100% cotton denim. CORDURA® Denim fabric retains the authentic look and feel of cotton denim, but with added abrasion resistance, and toughness. Jeans made with CORDURA® Denim fabric are exceptionally durable without compromising on comfort and style. Ride style and ride safe in TRILOBITE® jeans made with CORDURA® Denim fabric.

The main advantage of CORDURA® denim fabric is its extreme durability, tearing and abrasion resistance. At the same time it offers the feel and look of classic denim, therefore it gives the civil look to the apparel.

COOLMAX® technology is engineered for everyday comfort and performance. It has added cooling and drying performance to CORDURA® denim fabric. Adding the COOLMAX® fibers in denim means creating the moisture outlet system inside the fabric. This fiber system takes the moisture to the upper layer of the fabric which allows the rider to stay cool, dry and feel more comfortable when it comes on hot days.

Additional key benefits of CORDURA® Denim fabric include:

- The authentic look and feel of traditional 100% cotton denim.
- Exceptional abrasion resistance – Four times more resistant to abrasion than standard 100% cotton denim fabric.
- The heritage of the CORDURA® brand which has proven performance in many of the world’s toughest environments.

-  100% Cotton
-  Cordura® denim
- 

CERTIFICATIONS

Safety regulations are more strict these days then ever. Nowadays riders are more and more focusing into their safety. That is why we have been testing our jeans according to latest EU standards to bring you maximum safety level. New EU standard EN 17092:2020 brings new test metods which can much better simulate real crash and abrasion resistance when falling down on the road. Below you can see the explanation of each level and abrasion resistance time it has while sliding on the road. We have three different levels A - AAA. By these levels we are able to split the garments for different type of usage in accordance to abrasion resistance. For most risky riding we are developing garments with abrasion resistance reaching Level AAA which can provide most efective safety features in case of crash. Level AA garments are still very safe but with some lower features against Level AAA garments. Level A garments are developed for lower risks.

Our products are equipped with removable CE level 2 certified SAS-TEC protectors. This high-quality soft foam protectors offer excellent safety functions when riding a motorcycle.

SAS-TEC protectors will guarantee maximum impact protection.

RIDE FOR THE FUTURE

TRILOBITE® RECYCLE STANDARDS

TRILOBITE RECYCLED STANDARDS

Trilobite® target is to change the conventional way of motorcycle apparel production. While in the sports apparel industry it is nowadays quite common to use recycled materials for garment production, especially in ski & snowboard technical apparel, in the motorcycle apparel industry it is a unique approach.

Trilobite® is probably one of the first motorcycle apparel brands which uses recycled materials for garment production.

Although Trilobite is a motorcycle technical apparel maker, we still keep in mind the importance of a **clean environment**. We know it is not necessary to use natural resources in a careless way. Using waste as a raw material allows minimizing the consumption of natural resources. Trilobite® commits to help save the planet.

Trilobite® Premium Aramid Fashion future goal is to produce motorcycle apparel from 100% recycled materials.

In **2021 collection Trilobite come** to the market with products, which contain either **Recycled Polyester or Recycled Cotton**. Using recycled cotton helps to reduce the use of virgin Cotton, and thus the significant water, CO2 and other impacts from cotton farming. The pre-consumer Cotton from industry and post-consumer Cotton from discarded clothes goes to grinding process and then raw material is made again. After that, the raw material is processed into yarn and the yarn is turned into recycled Cotton.

**RECYCLED
RECYCLED**

**RIDE IN STYLE
RIDE SAFE
RIDE FOR THE FUTURE**

RECYCLED  PLASTIC BOTTLES	SAVE  THE PLANET	ENJOY  THE RIDE
--	---	--

Besides recycled Cotton, Trilobite® also uses recycled Polyester. By integrating 100% recycled polyester fabrics in garments Trilobite® is keeping bottles and other plastics out of the ocean. By taking 70 bottles out of the ocean we get 1 kg of recycled polyester. 14 bottles collected from the ocean to be used during the production of 1 Trilobite jacket for the lining. Besides, we help to save also the energy, because the energy consumption during the production of recycled Polyester is less than what is needed to produce the virgin Polyester. In particular, it takes up to 53% less energy.

Trilobite wants to keep our planet clean!

DENIM RECYCLING PROCESS

CLOSING THE LOOP ON DENIMS LIFECYCLE

What will you do with your jeans when they are no longer fit for wearing? Throw them away? But what happens then? Will they disappear?

Many individuals separate and recycle paper, plastics, and domestic waste, but not enough people responsibly recycle the textiles.

Denim jeans are made mostly of the seemingly pure and all natural Cotton plant. This thirsty cotton plant depends on fertile land, intensive irrigation, pesticide spraying and a sunny climate in order to thrive. An average pair of jeans uses up to 3,78 litres of water in its full lifecycle. 70% of this precious water is being used in cotton farming alone.

The majority of the worlds textiles are made of man made plastic fibers which then break down into hazardous waste when dumped in landfill. The enviroment cannot keep up with fashions constant rotation of fashion clothing which obviously create an unacceptable amount of wastage.

Recycling denim and textiles is the only way to close the loop on clothing’s linear lifecycle.

Trilobite® cooperates with denim brands that are developing innovative ways of recycling old denim into new denim garments. The old denim garments are deconstructed into scraps and shredded into raw cotton again, just like how it began. This Cotton fiber is then blended with virgin cotton to ensure good tensile strength and woven ito new denim fabric. By cutting out the agricultural process, jeans crafted with at least 15 percent recycled cotton save as much water as the entire manufacturing process consumes.

TRILOBITE CRASH PROGRAM

Trilobite® Premium Aramid Fashion appreciates its customers by offering the Trilobite Crash Program.

Any rider wearing the Trilobite motorcycle apparel during a traffic accident, damaging its motorcycle Trilobite clothing, has a chance to receive brand new items.

You can get a FREE pair of new trousers!

It is very simple!

Please, fill out the form on website www.trilobitemoto.com including the description of the accident and photo documentation. Submit the form with your contact information, and send us the damaged item to our headquarters.

Our team of experts will analyze the clothing after the accident, and our customer support will contact you regarding the new item.

Our philosophy is clear. We do not sponsor any sport riders, we sponsor regular people riders just like you, who by riding in our Trilobite® Premium Aramid Fashion clothing give us the feedback about the performance of our products. On return, we give the new clothing with our thank you note.

Please send us the damaged item to this address:

Bikers Crown Ltd.

CRASH STORY

"I took a pair of your Probut X-Factor pants with me on a 2 week tour of Peru, where I low-sided my bike in a turn, sending both me and the bike sliding across the pavement and down a ravine.

Thanks to your gear, I walked away without a scratch! Please extend my thanks to all your engineers and designers for literally saving my skin."

- our customer Andrew

Following pages carry all size charts. In order to find the right size, keep in mind that it is important to measure the product, not your body. Take your jeans or pants which fit you well and measure them like you see on the picture. Based on the measurement, find the right size on the chart. We believe that with the correct measurement and the size charts you will be able to find perfect size of our product which provides the proper function of Trilobite® jeans.
